

TransTech Systems is Moving!

Schenectady, NY (July 2016) – TransTech Systems, Inc. recently announced to its Board of Directors and employees, the plans to move its corporate office to 900 Albany Shaker Rd, Latham, NY in December of 2016. The new office will be approximately seven miles from its current location at 1594 State Street in Schenectady, NY.

For TransTech Systems, Inc., an instrument technology firm primarily serving the construction industry, the new office space means improved production and engineering space, new amenities for employees and room for growth.

TransTech Systems, Inc. will occupy approximately 14,100 square feet of the 21,000 square feet building. “The new floor plan will provide greater flexibility in how we develop and produce current and new products. It is designed to facilitate better workflow, and we are now able to position our entire company very efficiently in the new building. We expect this to improve communication, and most importantly, increase our build capacity of current products and collaboration on new products.” said Chief Operating Officer, Jaret Morse.

“We are fortunate to find such a nice space close to our current office. We really wanted to limit the impact that relocation could have on our customers and our employees. I don’t think we could have found a better location for our team. Our new location affords us enhanced operational efficiencies and will help us continue to grow and evolve. I am most excited about keeping pace with our technology needs, allowing us to provide exceptional value and superior service to our customers.” said David Apkarian, President and CEO.

Construction of the new space is slated to be complete near the end of November. If plans remain on schedule, TransTech Systems, Inc. will move in early to mid-December.
